

Teacher Workshop

Approaches to Learning

Education must respond to the needs of society. While we still want students to gain knowledge and understanding, focusing on skill-based instruction is essential to developing empowered and confident learners. How can educators increase students' thinking, research, social, and communication and self-management skills? Come learn about intentional practices to strengthen student skills. Investigate the interconnectedness of student learning and expand your own understanding of how to balance knowledge, concept and skill-based learning in your classroom.

Appropriate for preschool, early elementary, and elementary school educators. This workshop will explore:

- skills for learning
- metacognition
- assessment
- integrated learning
- structures to support inquiry
- teacher's role and stance
- thinking routines

High Meadows Center for Progressive Learning cultivates and promotes a deeper understanding of progressive practice through first-hand experiences.
